

Whitepaper v2.1

This Document is not a Prospectus

This whitepaper has been created for informational purposes only and may be changed in the future. The paper describes the vision of the Antidote DAO Team and may need to be modified to meet the realities of the market.

None of the information in this whitepaper is investment advice nor does it constitute an offer. The digital asset that is the subject of the whitepaper is not a capital market instrument, financial instrument or security.

Digital assets have high volatility. Therefore, it is recommended that all people who will purchase **a stake in AntidoteDAO through its NFTs or C4C tokens** should have knowledge about digital assets, blockchain and smart contracts. These individuals should make their own risk assessments. These assets can be considered very high-risk assets.

The **AntidoteDAO** community is not liable for insufficient information given in this whitepaper, updating this whitepaper or damages that may arise related to the content of this whitepaper.

Decisions to purchase this token or the financial results occurring after cannot be bound to **AntidoteDAO** or its community.

Executive summary

There are almost 8 billion people in the world, and one thing we all have in common is that every one of us has a loved one, family member, or friend who has been touched by the evil hand of cancer. Cancer is the second highest cause of death in the world with close to 20 million new cases annually. Preventing cancer and finding a cure to this terrible disease is one of the most significant public health challenges of the 21st century.

To help fight this growing epidemic, governments and private charities alike have funded projects to better understand this disease and fight to find a cure. Unfortunately, funding of these initiatives from government grants has not kept pace with inflation or the growing number of potential research projects to invest in. In fact, traditional grant sizes have remained stagnant for the last 10 years. At the same time, charitable contributions have also fallen by almost 20%, reminiscent of the lasting social and economic impact that Covid-19 has left on society. Faced with these two harsh realities, the fight against cancer has become more challenging. It is like trying to fight a battle with your hands tied behind your back. The goal of AntidoteDAO is to help release these bonds and directly fund cancer research initiatives.

The AntidoteDAO is a Decentralized Autonomous Organization which governs a funding pool and decision-making mechanism for identifying and supporting efforts to find a cure for cancer. AntidoteDAO Corp is a Texas based 501C3 Charity Organization.

At the core of the AntidoteDAO is the \$C4C governance token. \$C4C is the tradable and liquid token of the AntidoteDAO. Individuals or organizations can obtain \$C4C tokens by contributing funds, work or IP. Transacting \$C4C will contribute to the DAO's treasury through a 12.5% tax on all transactions. AntidoteDAO also accepts Direct Donations via NFT auctions from the AntidoteDAO NFT Collection. The AntidoteDAO also manages a P2E (play to earn) initiative for members to earn points and prizes. Lastly, the DAO treasury will manage and hold a collection of NFT based IP (Intellectual Property) from select projects it has invested in and will collect an associated licensing fee for access to this IP. The DAO rules and voting system dictate where treasury funds are allocated within the framework of charitable organization. By utilizing the decentralized community-guided decision-making process, AntidoteDAO aims to focus on funding and developing projects aligned with our core principles:

ANTIDOTE CORE PRINCIPLES

1. Leverage our crypto community to find a cure for cancer.
2. Decrease the time and effort spent by scientists writing grants to gain funding, making them more efficient.
3. Utilize the world's best researchers to participate in AntidoteDAO initiatives by promoting Decentralized Science (DeSci) and open science principles, making them more effective.
4. Enable the evolution of the research and development (R&D) community to utilize blockchain based technology, making these efforts more transparent and efficient.
5. Create a strong financial ecosystem for AntidoteDAO's \$C4C token and NFT Projects.
6. Our project will leverage our small community to illustrate the positive impact that Crypto can have on the global community. We will publicize our success and grow our community accordingly.
7. Ensure all community members' voices should be heard and carry weight, not just the voice of the people holding the largest bags.
8. Our AntidoteDAO will globally use the Crypto4Cancer platform to support these 3 funding initiatives:
 - Crypto 4 Community – Small grants sponsored by the activist guild in our Antidote community focused on helping cancer patients through community outreach.
 - Crypto 4 Collaboration - Medium grants sponsored by the alchemist guild in our Antidote community focused on collaborating with institutions, businesses, other DeFi and DeSci organizations which will have a positive impact on cancer patients and help to raise awareness and funds for future projects.
 - Crypto 4 Cure – Large SEED grants sponsored by the DAO and vetted by our Scientific Advisory Board that will be awarded to large cancer focused R&D institutions.

THE CHALLENGE

Traditional funding of cancer research is a labor-intensive process. Approximately 70% of Cancer research funding comes from government grants via the National Institute of Health (HIN) or the National Cancer Institute (NCI) with the additional 30% coming from private donations or from over 300 charitable organizations. With high competition for grant funds, the application process equates to a high effort, low reward process. The need to pay for their own research has left many of our top scientists focusing too much of their time, efforts and talent in securing future funding rather than focusing on the science. To date the NIH in conjunction with the NCI manages over 5,000 grants across 71 institutions in the United States. With their current budget constraints, less than 10% of potential projects are funded, leaving the other 90% in a position where they have spent their time, efforts and talent on a grant they will not receive. A conservative estimate suggests that the grant writing process wastes ~300M per year in time spent on grants that will not get funded. While some of these grant ideas may get considered at a later time or for other grants, the opportunity cost lost for these time and people resources is inexcusable, especially when people are dying from cancer. Many good ideas just are not given the opportunity to get off the ground. Many of these projects simply need seed money to help them create a more compelling story that will strengthen their future NIH and NCI applications for larger RO1 grants. The global cancer research community continues to make impressive gains toward finding novel therapies to target cancer, but most researchers waste valuable time on laborious grant applications. We, the [web3/blockchain/crypto](#) community, have an opportunity to partner with the cancer research community so that we can use our strengths raising funds and decentralized science to support their strengths performing research. We need to entertain more democratic, open, and transparent methods in this fight to cure cancer. Collaboration and open research in the scientific community could accelerate these R&D efforts.

Challenges also exist in the crypto space. Currently there has been an explosion of new coins, DAOs, NFT projects and P2E Projects that are poorly understood by the global community at large. Because this space is new to many, there are many [greedy](#) players out there taking advantage of others. Unfortunately, it is these stories which are highlighted in mainstream society which has turned many off to participating in this space. The lack of understanding of these decentralized initiatives and Web 3.0 fundamentals has led many lawmakers, and industry leaders to be skeptical about the value of the Defi and DeSci movements and the role these communities can, should and will play in the future. As a [community](#), we face the challenge of acting as [brand](#) ambassadors to the global community. It is our duty as stewards of this community to weed out these bad players, and to help build strong and healthy communities which we can leverage for good and noble causes. Any efforts we can make to raise awareness about the positive things that can come from the Defi and DeSci community should be leveraged to gain mainstream support for the Web 3.0 dream to be fully realized. The AntidoteDAO project is one such project that has the potential to make an immediate and personal connection to members [of the global](#) community, so they are emotionally invested in our overall goal while we are also delivering great scientific results, utilizing a decentralized platform.

THE OPPORTUNITY

The blockchain industry is revolutionizing a number of industries, including finance, supply chain, and management. The industry is also growing rapidly and has reached 5 trillion dollars. Despite this growth, it is still poorly understood by mainstream persons and as such there are negative connotations and misconceptions about the nature and benefits of crypto investments and blockchain technology. The DeFi and DeSci communities are **called to action** to grasp this challenge and devote intentional effort to make this technology more accepted and used by all of society.

WHAT IS A DAO?

DAOs – Decentralized Autonomous Organizations – are changing how organizations are coordinating their activities to create value.

AntidoteDAO is decentralized because:

- Control over its operations does not reside in a single location
- It is autonomous because the smart contracts that govern its operations determine how the AntidoteDAO functions, without the need for human intervention

DAO's are a paradigm shift in the very idea of economic organizations, offering complete transparency, total token holder control, unprecedented flexibility, and autonomous governance.

DAOs represent a massive upgrade on the traditional firm. AntidoteDAO uses blockchain technology and programmable incentives to solve issues traditionally faced by global organizations, such as financial transparency, process automation, governance, and aligning geographically-separated, individual stakeholders in pursuit of a common goal. By combining state-of-the-art technology with new token-economic, governance, and financial models, AntidoteDAO can provide substantial benefits for its members. With AntidoteDAO, communities can leverage the strengths of all members, turning them into active stakeholders to grow the network together.

RESEARCH AND CLINICAL TRIALS

RESEARCH & CLINICAL TRIALS

One important function blockchain could fulfill is connecting disparate data within a study to create a traceable record of what a participant did.

”

The medical research community can benefit from the use of blockchain technology as a basis for improved clinical research methodology, better transparency and to improve trust within research communities and between research and patient communities. This technology can enable more effective research which may require the coordination from multiple sites and stakeholders. Blockchain has the ability to carefully **manage massive** amounts of sensitive data coming from different sources and share this data in an open science setting.

CHARITY

CHARITY

For those making charitable donations, blockchain provides the ability to precisely track where your donations are going, when they arrived, and whose hands they ended up in.

”

For those making charitable donations, blockchain provides the ability to precisely track where your donations are going, when they arrived, and whose hands they ended up in. From there, blockchain can deliver the accountability and transparency to address any complaints around charitable donations which include inefficiencies in the allocation of funds made available to recipients.

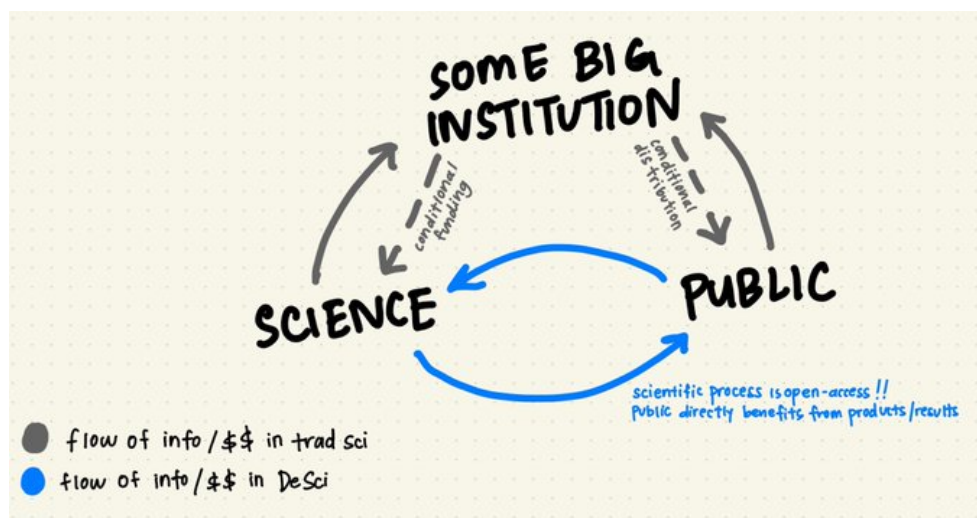

WHAT IS DeSci AND DeFi?

Still in its infancy, Decentralized Science (DeSci) lies at the intersection of two broader trends: 1) efforts within the scientific community to change how research is funded and knowledge is shared, and 2) efforts within the crypto-focused movement to shift ownership and value away from industry intermediaries. The DeSci movement aims to enhance scientific funding; unleash knowledge from silos; eliminate reliance on profit-hungry intermediaries such as publisher conglomerates; and increase collaboration across the field. DeSci aims to combat censorship through smart contracts and leverages its blockchain technology to incentivize communities to be a part in transparency and fund its models. It aims to rid powerful individuals from “owning” science.

<https://future.a16z.com/what-is-decentralized-science-aka-desci/#:~:text=Contents%20%3A%20The%20Evolution%20of%20The,decentralized%20science%20movement%2C%20or%20DeSci.>

Decentralized finance (DeFi) is an emerging financial technology based on secure distributed ledgers similar to those used by cryptocurrencies. The system removes the control banks and institutions have on money, financial products, and financial services. Decentralized finance eliminates intermediaries by allowing people, merchants, and businesses to conduct financial transactions through emerging technology. In the blockchain, transactions are recorded in blocks and then verified by other users. If these verifiers agree on a transaction, the block is closed and encrypted; another block is created that has information about the previous block within it. The blocks are "chained" together through the information in each proceeding block, giving it the name blockchain. Information in previous blocks cannot be changed without affecting the following blocks, so there is no way to alter a blockchain. This concept, along with other security protocols, provides the secure nature of a blockchain

<https://www.investopedia.com/decentralized-finance-defi-5113835>

HOW WILL WE LEVERAGE?

AntidoteDAO will also leverage the larger web3 community to reach their goals. Specifically, the 3OH DAO community and their Defi advocacy arm will help explain and educate our cancer focused community on how smart contracts and blockchain technology can be used to increase efficiency for research efforts while maximizing service functionality and reducing costs. Our goal is that over the course of several years we will help to make blockchain technology and smart contracts the backbone of future cancer research efforts. Utilizing the experts from the 3OH community as technology advocates along with members from the blockchain technology community, we will use our grants as ways to introduce this technology into the workflows used at these research institutions.

Secondly, the 3OH community will be additionally leveraged to educate government entities about the value of blockchain. With the waste and gaps we have identified used in current funding processes, we will utilize the 3OH PAC and its lobbying arm to focus and shift policy discussions to enact such changes in future scientific RO1 funding rounds.

THE SOLUTION

AntidoteDAO and their community will collect revenue and use these funds to support cancer related projects and research efforts. We aim to accomplish this through our:

TREASURY

The AntidoteDAO Treasury earns revenue through 4 independent sources.

1. Tokenomics of the \$C4C Token initiated via a tax (12.5%) on all transactions
2. NFT sales and direct donations to the AntidoteDAO 501c3 charitable organization.
3. Play 2 Earn (P2E) Game Earnings
4. IP Licensing fees

\$C4C TOKEN

\$C4C Token is the tradable and liquid token of the Antidote DAO. Individuals or organizations can obtain C4C tokens by contributing funds, work or IP to the Antidote DAO Project. Tokenomics are described below.

Tokenomics		
1.5%	ThreeOH DAO Angel Investors	Assist with initial marketing initiatives
1.5%	Grifters Redemption	Assist with funds for initial LP and technical Dev work
9.5%	DAO Treasury	To fund our charitable goals of curing cancer
12.5%	Total Tax Revenue per Transaction	

- First 500 holders of the C4C token will be whitelisted for NFT mint.
- All wallet to wallet transfers are exempt from the 12.5% transaction tax.

NFT AUCTIONS

For many traditional supporters of cancer research initiatives, our NFT collection will provide an entry point for newcomers to the community to begin to engage in the world of web3. AntidoteDAO accepts direct donations to the treasury via NFT auctions from the AntidoteDAO NFT collection. We will mint this library of NFTs using the Wenmint launch pad. AntidoteDAO has envisioned a revolutionary NFT Library with utilities that are valuable. These NFTs can be purchased in some cases or earned in others. Possession of such NFTs and the smart contracts associated with them, unlocks certain rights and utilities which may include the following:

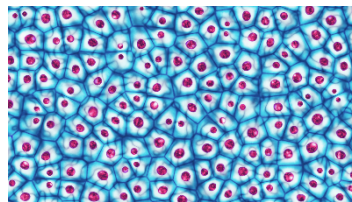

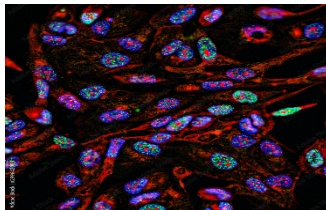

- A Charitable donation **receipt** for the value of the donation, which can be used for tax relief purposes. Non-Transferable.

- A non-transferable, NFT Antidote picture (similar to this example at left), to be held in the investors Crypto wallet. This NFT has properties associated with it that tie to the Antidote P2E game structure and Antidote community member levels.
- Varying access to future potential sandbox locations, virtual groups, meetings and events.
- Voting rights in DAO activities and time limited guild membership for the wallet associated with the NFT.

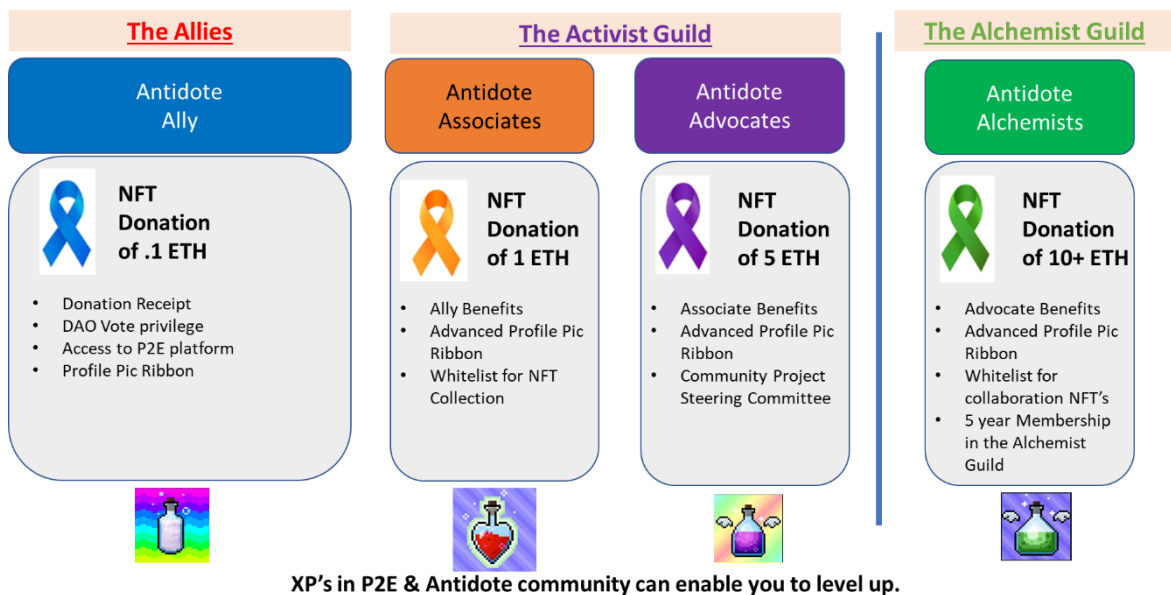

- Profile Pic Cancer Ribbon which can be added to enhance the border of an Antidote **member's** profile picture to identify **themselves** as a member of the Antidote community when participating in Social media channels (Telegram, Instagram, Twitter, Discord, etc...). Ribbon Colors may indicate level of community engagement in the Antidote community.
- Access to the Antidote library of games and P2E contests
- Higher Value NFTs like seen below, come from images generated during our research efforts. These NFTs come with additional utility. For example, a person who wins the auction for one of these (1/1) gets to have the right to name the next Cure SEED Grant given to a cancer research institution. Appropriate naming rules will apply.

NFT Economics		
5.0%	NFT Creation & Function	<i>Pay for Art and Contract</i>
10.0%	Minting & Marketing	<i>Mint fees and Marketing efforts</i>
85.0%	DAO Treasury	<i>To fund our charitable goals of curing cancer</i>
100.0%	Total NFT Revenue	

ANTIDOTE DAO NFT's

PLAY TO EARN GAMES

AntidoteDAO also manages a library of P2E games for members to earn points and prizes. Members can earn experience points, NFTs with different properties, \$C4C tokens and other prizes for their use of the Antidote P2E library.

P2E Economics		
25.0%	P2E Development	<i>Development work for P2E game and improvements</i>
25.0%	P2E Rewards & Marketing	<i>P2E Gaming Rewards and Marketing</i>
50.0%	DAO Treasury	<i>To fund our charitable goals of curing cancer</i>
100.0%	Total P2E Revenue	

VOLUNTEER TO EARN EVENTS

AntidoteDAO will always encourage its members to volunteer in their local community cancer outreach projects and talk about what the AntidoteDAO team is doing. Participating in such projects and verifying participation and involvement in these outreach events may enable community members to earn experience points which can be traded for NFTs with different properties.

IP FROM RESEARCH AND DEVELOPMENT EFFORTS

Lastly, the DAO treasury will manage and hold a collection of NFT based intellectual property from select projects it has invested in and will collect an associated licensing fee for access to this or a portion of this IP. These funds will be distributed to the treasury on a quarterly basis.

THE INVESTMENTS

Using funds from the DAO's treasury, we have identified and will fund projects at three different levels each funding cycle. A funding cycle is identified and started each time the treasury has accumulated 45 ETH of funds. These funds will be distributed and allocated according to the chart below.

 Funding Levels				
Investment	Quantity	Project	Area	Details
5 ETH	1	Community Grants	Local	Activist sponsored projects to focus on smaller local community initiatives
10 ETH	1	Collaboration Grants	Macro	Alchemist sponsored projects to focus on larger cancer related collaboration projects
30 ETH	1	Cure SEED Grants	Global	Direct Grants to R&D Institutions vetted by our Scientific Advisory Board (SAB)
45 ETH	3	Total	As soon as the Treasury has accumulated 60 ETH, a funding cycle event is initiated automatically.	

BURN OR INVEST

To ensure the hyper deflationary nature of AntidoteDAO's \$C4C token, a portion of the funds, 3.375 ETH or (7.5%) for each 45 ETH (~150,000 USD) funding cycle allocation, is to be set aside for either a burn event or an investment event. This burn or buy is proportional to the collected treasury funds for that cycle. For treasury funds collected via a token transaction tax, 7.5% of

those funds will be permanently destroyed via a burn wallet. Funds collected to the treasury from the other treasury revenue streams, this 7.5% will be invested back into the revenue stream from where those funds originated (P2E, NFT, ETC...)

For Example: If 30 ETH of the required 45 ETH needed to initiate the funding cycle comes from token transaction taxes and 10 ETH comes from the NFT projects and 5 ETH comes from P2E initiatives, the resulting burn or buy would entail the following burn or buy: a 2.25 ETH \$C4C token burn, a .75 ETH investment into NFT's and a .375 ETH investment into P2E initiatives. This total 3.375 ETH burn or buy ensures the hyper deflationary nature of the \$C4C Token and the increasing value of the NFTs and functionality of the P2E landscapes.

CryptoCommunity

- **5 ETH** in size
- Activist guild sponsored
- Alchemist guild vetted
- cancer related outreach projects focused on our Antidote community members engaging with local communities directly, making an impact at the local level.

CryptoCollaboration

- **10 ETH** in size
- Alchemist guild sponsored
- Alchemist guild vetted
- cancer related collaboration projects focused on working directly with businesses, institutions, DeFi and DeSci organizations which will have a positive on cancer patients.

CryptoCure

- **30 ETH** in size
- R&D institution proposals
- Scientific Advisory Board vetted and selected projects
- Alchemist guild culled
- cancer related R&D projects focused on finding a cure for cancer.

CRYPTO FOR COMMUNITY GRANTS

Our global network of Antidote DAO activist guild members will identify multiple and fund 1 opportunity per funding cycle for a 4.625 ETH donation to a relevant local community cancer engagement project. Activist members can work together to identify such projects, discuss them via Telegram or Discord and create a short proposal for the Alchemists to review for consideration of a full community vote. These projects can be donations to other charitable organizations to raise both awareness of the AntidoteDAO team to these other organizations as well as raising funds for our shared goal of curing cancer. These projects could be allocated to help a local cancer care facility or help a specific cancer patient. It is up to the activist guild to build their proposals and support them with documentation. The alchemist guild will review these proposals and

choose the top candidates for the Antidote ally and Antidote activist guild communities to vote upon collectively.

Beyond funding these types of cancer focused projects, the goal of these projects is to also foster a community of engaged allies with the goal of turning them all into Antidote activists.

CRYPTO FOR COLLABORATION PROJECTS

Our alchemist guild community, (defined in the next section as the top 25 staked token holders + holders of any NFT's with alchemist or higher voting rights, can propose multiple potential projects per funding cycle, 1 such opportunity per funding cycle will be selected for a 9.25 ETH grant donation to fund and support larger global community related projects.

These projects may include collaborations with institutions, businesses, other DeFi and DeSci organizations which will have a positive impact on cancer patients and will help to raise awareness and support cancer research and/or cancer relief initiatives. These collaboration grants are ones in which the AntidoteDAO team can more easily own a piece of any intellectual property generated as we will be working directly with individual companies and smaller cancer focused institutions and charities. These collaboration projects will be strategic in nature and will help our organization to gain visibility in the global charity communities as well as leverage more of the DeSci and DeFi communities to engage in our goal of finding a cure for cancer. The alchemist guild will review these proposals and choose the top candidates for the Antidote Ally and Antidote Activist guild communities to vote upon collectively.

Beyond funding these types of cancer focused projects, the goal of these projects is to demonstrate to mainstream businesses, industries and other organizations that the whole of our AntidoteDAO community will get directly involved in these collaboration projects and will leverage all of their contacts and knowledge in the relevant industries, research, DeSci and DeFi communities to make these projects succeed. We aim to illustrate the power of a decentralized movement.

CRYPTO FOR CURE SEED GRANTS

Our scientific advisory committee (SAC, as outlined in the following section) will work directly with the AntidoteDAO organization to reach out directly to global leaders and organizations in cancer research and call for grant proposals in the form of a short letter of intent (LOI) for a 27.75ETH Cure SEED grant. Due to the nature of funding cycles, There will be two active Cure SEED grant funding cycles per year to coincide with the off season for NIH Grant activities. The SAC will review LOI's and applications twice per year in fall and spring to coincide with gaps in traditional government funding timelines. This LOI is a simple, short and concise document in which a researcher presents the essential elements of a proposed research project to be performed with

this award. The LOI will include a brief explanation of the scientific project including scientific aims and methodological overview, how it helps them achieve their goals, how blockchain might be used to achieve project goals more efficiently and how the project benefits the cancer research community. Based on LOI reviews, the SAC will identify a selection of finalist projects for funding consideration and will invite them to prepare a short, but more comprehensive grant application which the SAC will again review more carefully and provide comments to the DAO Alchemist guild for review and recommendations to the whole AntidoteDAO community for voting. It is the responsibility of the SAC to review, identify, vet, rank and advise on these grant proposals. The Alchemist guild will choose the top projects and prepare a short 1 page project description identifying the pros and cons for each top project. These proposals will be submitted to the Ally and Activist community for voting and final grant award. These projects identified on this list will be ranked and any can be considered for multiple funding cycles that occur between the SAC Cure SEED grant review cycles.

Beyond funding these types of projects, the process highlighted above, when utilized correctly, will save up to 80% of the wasted time typically used in cancer funding requests. This methodology will also accelerate smaller projects which typical government grants may overlook due to size. Using the success from these Cure SEED funding cycles, the AntidoteDAO will enable these research teams to prepare stronger future RO1 grant proposals. If the AntidoteDAO methodology is successful, we could potentially increase the funding levels to accommodate larger grant awards in the future.

GRANT FUNDAMENTALS

If during any funding cycle, the SAC, Alchemist guild, or Activist guild are unable to identify a suitable project, those funds allocated to those projects will roll over to be used in a future funding cycle. As a condition of the Crypto4Community, Crypto4Collaoration and Crypto4Cure SEED Grants, the beneficiary or recipient of these grants and projects will provide the Antidote DAO community with the following commitments.

- The workflows described herein will be utilized as they have been incorporated into our practices to streamline funding of these initiatives. Our aim is to remove many of the burdens associated with typical grant proposals and funding cycles. Block chain technology should be highly considered, but not mandatory when publishing data to enhance transparency, and traceability. This aligns with our vision of enhancing project effectiveness and efficiency through blockchain technologies.
- Publish project updates and share results with Antidote DAO so the DAO can share and highlight these projects with the general public to encourage transparency and community engagement in our investments. The Antidote community will be allowed to use the collaborating Institution's name and logo as well as core team members bios in

their subsequent marketing and fundraising efforts aligning to our vision of highlighting the good the crypto community can do.

- If appropriate, researchers may be called to be interviewed via podcast or AMA or present virtual project updates to members of the Crypto community.
- Grant recipients agree to accept funds in ETH, BTC or BSC crypto currency aligning to our vision of making Crypto currencies more acceptable in the mainstream markets.
- Publish results in a public and open domain so other researchers can benefit from our learnings, both good and bad using open science principles.
- Agree to share any directly developed IP generated from the funded research project. We are in the charity business and should be able to participate in any potential IP developments as they could fund future charitable work. Our goal would be for the institutes/collaborators to publish this information in a public forum with the positive and negative results being shared so that others can learn from both. Our IP goal would be to license this IP in the public space and generate revenue for our Treasury so we can fund additional projects.
- Use the AntidoteDAO and C4C logo and links on institutional media, so our organization can be recognized for our philanthropic efforts.

ALLIES, ACTIVISTS, ALCHEMISTS AND RESEARCH SCIENTISTS

Miriam Webster's Dictionary defines the following:

***"Ally,** a person or individual composing a part of a group that provides assistance in an ongoing effort activity or struggle"*

***"Activist,** a person who uses or supports strong actions in support or in opposition to a cause"*

***"Alchemist,** someone who transforms things for the better. Historically, alchemists believed that lead could be "perfected" into gold, that diseases could be cured, and that life could be prolonged through transmutation or a change of some essential element into a superior form."*

***"Research Scientist,** a person learned in science, engaged in careful, diligent research and studious inquiry or examination, an investigator"*

***"Antidote** a remedy to counteract, relieves or prevents the effects of a poison"*

AntidoteDAO aims to make the funding of cancer research more streamlined, autonomous and transparent. We will remove the middleman and the bureaucracy that keeps donations and funding dollars from getting to the scientific community through the utilization of smart contracts and block chain technologies. Leveraging the power of blockchain, and the funding power of the crypto community, AntidoteDAO is poised to make a lasting impression and is devoted to aiding in the global initiative to find a cure for cancer.

To help direct where the AntidoteDAO funds are focused, we introduce to you the following teams, their structure and roles and responsibilities.

THE ALLIES

Any holder of the \$C4C token or an AntidoteDAO NFT is considered an Antidote Ally. These community members have the rights and responsibilities to vote on funding initiatives brought forth by the Activist and Alchemist guild communities. DAO governance via the \$C4C token dictates the number of votes each member receives. All voting will be done via smart contracts in the discord platform.

THE ACTIVISTS

A member of AntidoteDAO is considered an Antidote activist guild member when they stake any

portion of their \$C4C tokens or when an NFT they own via either purchase, earned or collected as a prize grants them Activist rights. Staking of their \$C4C Tokens yields a 1.25x weight on all potential governance votes. All voting will be done via smart contract in the discord platform. Activists have the unique ability to propose via discord potential community activism projects per funding cycle. These projects will be reviewed and prioritized by the Alchemist guild and the final 3 project ideas will be submitted back to the activist guild and ally community for voting on these crypto for community projects every funding cycle.

THE ALCHEMISTS

A member of Antidote DAO is considered an Alchemist when they Stake any portion of their \$C4C tokens and are recognized as the top 25 holders of staked tokens in their owned wallets, or when an NFT they own via either purchase, earned or collected as a prize grants them Alchemist guild member rights. The Alchemist guild has no voting rights associated with their staked tokens. This is done so top token holders cannot control the activities of the Antidote DAO, making the organization more democratic. Alchemist guild members have the unique ability to propose potential crypto for collaboration projects via discord during each funding cycle. These projects will be reviewed and prioritized by the whole of the Alchemist guild and the final 3 project ideas will be submitted to the activist guild and ally community for voting on these collaboration level projects every funding cycle.

THE RESEARCH SCIENTISTS

The Scientific Advisory Committee (SAC) is made up of members of the Cancer Research Scientific community; the size of the SAC may fluctuate based on the number of funded projects, which will be dictated by treasury size. This committee is led by Dr. Keri Schadler, BS, PhD Tenured Professor in the department of Pediatric Research from The University of Texas MD Anderson Cancer Center in Houston TX. She also sits on the Board of Advisors for the Antidote DAO charitable organization. Collectively, the Antidote team has identified 5 potential additional SAC members from institutions across the globe. This team has the responsibility to review the LOI's submitted for funding consideration and curate a selection of proposals for the alchemist guild to put up for a vote to the community.

This team will be made available to participate in our community outreach virtual events well as fundraising functions we may host. They each will be issued an NFT which defines the rights, responsibilities and rewards they are committing to fulfill the SAC role. This SAC will be chosen by the AntidoteDAO Board and approved by a vote of the Alchemist Guild. They will receive a small project bonus of 1ETH worth of \$C4C tokens per funding cycle which will vest every funding cycle. They will serve for 2 year terms which are renewable. Upon their potential retirement, they are tasked with identifying 3 potential replacement candidates to fill the role they vacate. They will remain as members of Alchemist Guild for 1 year following and free to participate as much or as little as they would like.

THE IMPACT

The impact of these initiatives will have an immediate and positive effect on the world, research and crypto communities.

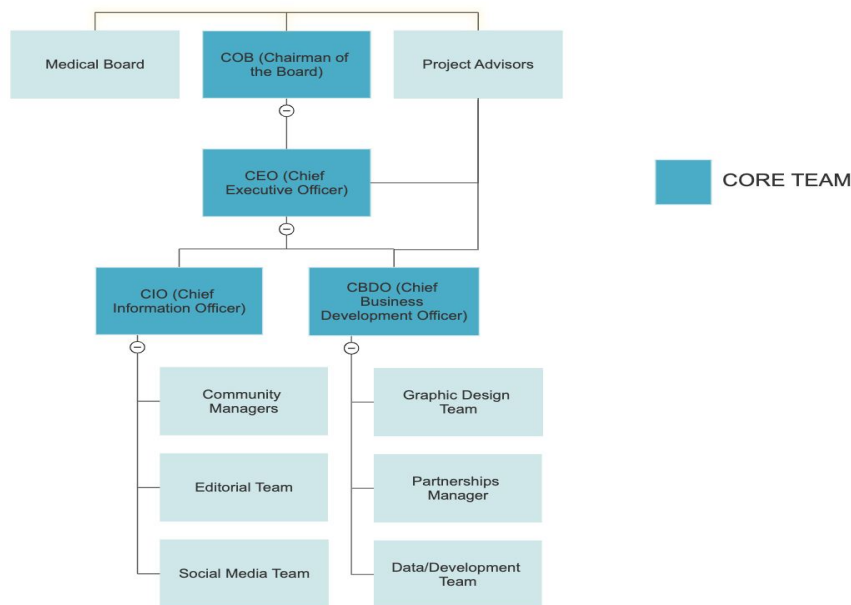

- First, we will raise a large sum of money which will help to find a cure for cancer. The levels and types of the funded projects encourage hands-on engagement by members of the AntidoteDAO community and local communities, collaboration partners and research institutions. Getting the AntidoteDAO name out to the public and highlighting the immediate and positive impact of these initiatives will be a key enabler to help the web3 community grow.
- Supporting cancer research, which is universally appreciated as a contribution to humanity, will help to make the web3 community become better understood and accepted by the rest of society. Currently, cryptocurrency and blockchain is not well understood by the public, and there is a stigma of distrust because of this lack of understanding. Each of these different projects not only highlights the good we can accomplish using cryptocurrency, they also highlight the efficiencies that can be gained by utilizing blockchain. By transmitting these funds directly to these institutions in blockchain currencies, we help these institutions transition to start to accept cryptocurrency as a form of payment. This is an opportunity to create good will for the web3 community which should be leveraged to the fullest.
- This new pool of funds, previously untapped and raised in cryptocurrency, will now be accessible to fund cancer research. By funding the C4C projects in crypto currency, we help push the acceptance of these assets in the global community. This is a key initiative as studies show that more and more individuals are considering cryptocurrencies as part of their long-term investment portfolio. With less than 20% of the world invested in some sort of cryptocurrency and less than 5% utilizing NFTs, there is plenty of room to grow these communities in both size and market capital. Tapping into new sources of funds will raise more money as well as awareness on C4C efforts. The AntidoteDAO and the C4C projects can and will act as a catalyst to make altruism more mainstream in the crypto space and make crypto more acceptable and understood in the global community.
- Tying these crypto investment strategies to vesting, staking and tax implications, we can create an outlet that provides value both to investors and to the charitable organization.
- AntidoteDAO will help to feed the growth of the DeFi ecosystem with well-funded cancer advocacy projects, and put out a call to action to all of the global crypto community to prioritize initiatives like Crypto4Cancer, Crypto4Community, Crypto4Collaboration and

Crypto4Cure. C4C is Crypto with a conscience and will be a launching pad to solve global community problems, research community problems and crypto community problems.

DAO ORGANIZATION

DAO MANAGEMENT TEAM

The AntidoteDAO organization is proposed below. We will utilize this structure until the full impact of the DAO and the decentralized functionality is working effectively and the Antidote DAO is self-sustaining. The AntidoteDAO founder and CEO, Niko Katsuyoshi runs the Antidote organization which is comprised up of mostly volunteers who may receive nominal \$C4C Token or NFT grants that vest over time.

DAO BOARD

The Advisory board is made up of seven members. The Chairman of the board is led by Antidote Co-founder John Daniels and is composed of a multitude of various members with different skill sets and industry backgrounds. These members will be appointed for three-year terms and confirmed by a community vote. Once a community board member's term has ended, they can be reelected by the community to a successive term. The AntidoteDAO CEO and Board Chairman will retain the multisig wallets and will post all transactions to the community website and Discord server for transparency. Members of the board can be removed via community vote based on the recommendation of the board, DAO management and the community.

MARKETING

INFLUENCERS AND INITIAL STRATEGY

The AntidoteDAO team will work with our project sponsors in the Grifters and 3OH DAO communities to leverage their expertise in initial marketing efforts. We have initially identified and engaged with 2 top influencers who will work with the AntidoteDAO as Ambassadors, to conduct AMAs (Ask me Anything) prior to launch. Influencer marketing will be the cornerstone of Antidote DAO early marketing strategy. We will use initial presale raise funds to immediately fund marketing efforts as well as fund our first grant funding cycle. Our NFT collection launch will be aligned with the award of the first grant, so we can highlight the impact of this 45 ETH donation to the Community, Collaboration and Cure Grants. These marketing efforts will bring in new investor traffic to our sites and to the Defi community at large.

TRADITIONAL MARKETING

We will utilize existing Antidote Telegram, Discord, and targeted influencers for dissemination of project information.

It is important to communicate with potential investors and to provide a transparent vision that clearly communicates the Antidote Mission and Revenue Model.

Website: antidotedao.org

Twitter: <https://twitter.com/antidotedao>

Telegram: <https://t.me/antidotedao>

Instagram: <https://www.instagram.com/antidotedao/>

Discord: <https://discord.com/invite/TJmn8YYgpr>

We own these sites and they will point to our final site. We need to decide how to best present AntidoteDAO to the public from these social media platforms. What will be most understood by the target community.

TOKEN ECONOMY

DISTRIBUTION

Total Supply: 8 Billion Tokens, 1 to represent every person on earth.

Presale: 20% will be allocated for Vested Presale

The following 6-month Presale Vesting Structure will be utilized

Day 1: 0%

Day 15: 10%

Day 28: 25%

Day 60: 50%

Day 120: 75%

Day 180: 100%

Soft Cap will raise 100 ETH, Hard Cap of 150ETH. Presale will be used to fund Initial C4C Grants, Central Exchange (CEX) Listings and LP. Liquidity will be locked for 1-year.

Community: 40% will be allocated for Community which will be made available when Token launches

Marketing: 10% will be allocated for Marketing

Science Advisory Team: 10% will be allocated for Science Advisory Team

Exchange: 15% will be allocated for Swaps/Exchanges

FAQs:

Launch Price: TBD

Locked Liquidity: Liquidity will be locked for one-year after launch

Doxing: Dev Team is Doxed via Certik KYC

CEX Listing and CMC: Registration will be submitted prior to public launch and expedited using a reputable service provider.

STAKING

By staking a wallet and locking that stake, an investor can take advantage of having their tokens tied up by receiving higher returns on their tokens. The structure of the DAO organization encourages staking of funds as it will create a more stable token price for the community.

Holders of the AntidoteDAO \$C4C token will have the opportunity to stake for three different periods of time (3 months, 6 months, 12 months)

Once staked, tokens vested will not be available to be withdrawn until said date, and the liquidity must be locked for the time period stated. Benefits are proportionate to the amount of time staked:

- 3 month stake
 - 5% interest
 - 1.5x weight on governance decisions
- 6 month stake
 - 7.5% interest
 - 1.5x weight on governance decisions
- 12 month stake
 - 10% stake
 - 1.5x weight on governance decisions

TOKEN LAUNCH

This project will initially launch on uniswap on the Ethereum network on May 4th, 2022. Contract Address, Token Symbol, and Launch Time will be posted in the Community Telegram once determined with the Dev and Advisory Team. Chat will be muted within an hour of launch to prevent malicious actors from spamming the chat with fake contract addresses and honey pots.

MAXIMUM

No Max transaction. Max wallet size will be 5% of total supply.

BSC

The token launch will take place upon the reaching of 500 holders or July 14, 2022, whichever comes first on Pancakeswap on Binance Smart Chain (\$BSC).

The launch time will be posted in the Community Telegram once determined with the Dev and Advisory Team.

Chat will be muted within an hour of launch to prevent malicious actors from spamming the chat with fake contract addresses and honey pots.

BRIDGE

The two chains will be bridged in August of 2022 using Everrise Bridge (\$RISE).

USE OF FUNDS

1.5% Three OH DAO DeFi Advocacy

Each buy and sell will distribute 1.5% to ThreeOh DAO. ThreeOh DAO will assist Antidote DAO in constructing a non-traditional DAO governance model, implementation of the supporting technology, and is assisting with development of the Antidote DAO White Paper. ThreeOh DAO will support and advise formation and operation of Antidote DAO until such time as the DAO votes to remove or replace ThreeOH advisors.

1.5% Grifters Redemption

Each buy and sell will distribute 1.5% to Grifters Redemption. Under the Grifters Redemption Program, Grifters Dev will launch the \$C4C token, implementation of the influencer marketing plan, and is coordinating the early NFT engineering with WenMint. Grifters will serve as advisors for Antidote DAO and C4C until such as time as the organization becomes self-sustaining. This 1.5% will be paid to the Grifters team in perpetuity of the Antidote DAO Project.

9.5% Antidote DAO 501C3 Charity

Each buy and sell will distribute 9.5% to the C4C DAO Corp 501c3 organization. These funds as outlined earlier will be used to fund identified projects which have been vetted and then voted on by the DAO community.

PROJECT ROADMAP AND MILESTONES

PHASE 1: EARLY INVESTMENT

- Tokenomics and Distribution Model
- White Paper
- Social Media: Twitter and Telegram
- Graphic Design and Branding Framework
- Marketing Engagement: Select Influencers, Twitter Spaces
- Smart Contract Development and Launch
- Launch on ETH, Uniswap
- Funding of First Grant to Research institutions.
- Initial NFT library Launch

PHASE 2: FUNDAMENTALS

- CEX Listing and Coinstore
- Multichain Launch on BSC, Pancakeswap
- NFT Framework in collaboration with the P2E structure
- Techrate Audit
- P2E Library development

PHASE 3: BEYOND MODERN

- Sandbox and NFT access to Virtual spaces
- P2E Library Launch
- Additional NFT drops and Antidote NFT Collaboration projects.
- Other Exchanges
